WE SPECIALISE IN DELPHIX USER TRAINING

The Importance of User Training

The Delphix Dynamic Data Platform has exceptionally intuitive graphical user interfaces however the concepts of data virtualisation and masking can be hard to grasp.

Understanding advanced topics such as the command line interface, application programming interface or maximum performance configurations requires a deeper knowledge of the product.

Without structured training learning can be slow. Often the day job takes priority over learning time which can lead to gaps in product knowledge. You don't know what you don't know!

The lack of subject matter experts within the organisation will inevitably lead to a slow-moving implementation and the business not fully exploiting the benefits the Delphix DDP has to offer.

The Benefits of User Training

Quality training breeds confidence as knowledge increases. A confident technical resource will not only shorten project timescales through faster onboarding, but will also enjoy the process too, which improves productivity. Consequently the rate of maturity of the Delphix DDP within the business is strengthened and business value increases.

As with all technologies it is important for user training to be an on-going endeavour to ensure your staff are up-to-date with product changes and new staff are brought up to speed quickly.

Timely training ensures business needs can be met enabling rapid adoption and expansion.

Learning Paths

Self-teaching / Experimentation

When formal user training is overlooked it generally results in an expectation that your technical resources will learn all the skills they need as part of the implementation process, which inevitably slows the pace down. When self-teaching you tend to only learn the topics for the use-case or issue in front of you. Having the time to read the documentation from cover to cover just isn't an option.

It becomes a process of trial and error and mistakes will be made. Rectifying the mistakes takes time. Although the Delphix Support team are some of the best in the industry, the process of fixing problems will lead to delays.

eLearning

Delphix provide an eLearning environment via Litmos LMS. LMS is a cloud based learning environment and therefore easily accessible from anywhere at anytime. Students can learn at their own pace but it is important that dedicated learning time, outside of the day job, is allocated.

LMS tracks and reports on student progress and new content is released regularly with Delphix Education moving towards a continuous development model.

Delphix regularly schedule webinars that can provide focused learning on specific subjects and showcase latest product features. Webinars can compliment other more structured learning.

Instructor-led Classroom Based Training

A key task in any new product implementation project or personal development plan should be the allocation of time for learning. When technical resources can be removed from their day-to-day responsibilities it focuses their attention resulting in better quality learning. With time allocated for learning, classroom based instructor-led training provides the maximum return on time invested.

Delphix provide a number of courses that cover all aspects of the DDP. The format in which they are delivered promotes open group discussion with a product expert on-hand, which together ensures maximum knowledge gain.

LabAlchemy

Getting hands-on with technology is imperative when working through a learning program and this is especially true for the Delphix DDP. The Delphix Education department know this and have developed an industry leading lab environment where every student receives their own private workspace to use during classroom based courses.

Hosted in AWS, LabAlchemy is a fully interactive Delphix environment accessed through a standard web browser from the students PC.

INSTRUCTOR-LED CLASSROOM BASED COURSES

Course Delivery

As a Delphix partner Kuzo Data focuses on training and delivery of the Delphix Dynamic Data Platform. We offer standard and enhanced versions of four structured instructor-led classroom based courses – endorsed as the “Plus” courses.

All courses contain official material from Delphix Education with hands-on labs using LabAlchemy. Each course is aimed at specific roles within your organisation, scheduled per customer and delivered at a location of your choice. Where you have specific requirements we can create bespoke courses to suit.

Delphix Courses

Dynamic Data Platform

Learn all three main features of the Delphix DDP and advanced topics - data virtualisation, data self-service and data masking.

Admin for Oracle or SQL Server

Training in the data virtualization feature of the DDP only.

Self-Service

Training in the self-service feature of the DDP only.

Data Masking

Training in the data masking feature of the DDP only.

Delphix Standard Courses

- Created by Delphix Education & Enablement
- A standard offering delivered by Delphix consultants and partners
- Introduces the concepts and main features of the DDP
- Enables adoption of the core components and use-cases

Delphix Plus Courses

- Based on Standard course with extra advanced content
- Developed and delivered by Kuzo Data in consultation with Delphix Education
- Teaches all aspects of the DDP – shortest route to becoming a product expert
- Enables maximum exploitation of the Delphix DDP

WHY CHOOSE US?

Our Delphix trainers are also our Delphix consultants - technical experts with up-to-date real-world experience delivering Delphix into global enterprises. Design, implementation, security and support are key to successful delivery of technology to the business and it is exactly these topics we teach on our courses.

We run our courses at the customers location and/or remotely to suit – there are now Delphix experts in New Jersey, London, Sheffield, Dusseldorf, Pune, Hyderabad, Hong Kong, Shanghai and Guangzhou thanks to Kuzo Data.

We offer a flexible and positive approach to course delivery. We consult with you first to understand your requirements and structure the training around those needs. We always strive for an enjoyable and fulfilling learning experience.

The consistently positive course feedback and glowing recommendations from our trainees and customers alike consolidates our position as the leading supplier of Delphix education.

OUR SERVICES DELPHIX

DATAOPS CONSULTANCY

Kuzo Data is a Delphix partner and established provider of Delphix technology delivery from PoC to implementation, user training to support.

DELPHIX TRAINING

Experienced and proven global provider of instructor-led classroom based training for the Dynamic Data Platform.

ABOUT US

Kuzo Data is an information technology consultancy focused on delivering exceptional service and value to commercial enterprise and government customers globally.

We specialise in data management and database technology supporting the leading enterprise database platforms and the Delphix Dynamic Data Platform.

Our services include planning, design, implementation, project management, support, training and recruitment.

Contact our Principal Consultant and Head Trainer Matt Griffith directly to discuss your training requirements. He's passionate about training!
