KUZO Data

L E A R N

D≡LPHIX

Courses

As a Delphix partner Kuzo Data focuses on training and delivery of the Delphix Dynamic Data Platform. We offer enhanced versions of four structured instructor-led classroom based courses – endorsed as the "Plus" courses.

All courses contain official material from Delphix Education with hands-on labs using LabAlchemy. Each course is aimed at specific roles within your organisation, scheduled per customer and delivered at a location of your choice. Where you have specific requirements we can create bespoke courses to suit.

LabAlchemy

Getting hands-on with technology is imperative when working through a learning program and this is especially true for the Delphix DDP. Delphix Education know this and have developed an industry leading lab environment where every student receives their own private workspace to use during classroom based courses.

Hosted in AWS, LabAlchemy is a fully interactive Delphix environment accessed through a standard web browser from the students PC.

Dynamic Data Platform Plus
4 Days

- All topics from the Admin for Oracle / SQL Server course
- All topics from the Self-Service course
- Introduction to data masking – the four step masking process
- Advanced architectures
- Virtualisation best practice
- Automate Delphix processes

Admin for Oracle or SQL Server Plus
2 Days

- Configure the Delphix Engine and create virtual databases, users and groups
- Navigate the Delphix Engine Interface
- Manage dSources, VDBs and capacity using Policies
- Integrate VDBs into existing workflows
- Work with Delphix Support
- View performance metrics from the Delphix Engine
- Interact with the CLI and API

Self-Service Plus
1 Day

- Create and Manage Self-Service Data Users
- Manage dSources and VDBs assigned to Self Service
- Create a Data Template and Container
- Browse branches and timelines
- Interact with Self-Service Controls
- Perform data operations
- Use dxtoolkit scripts

Data Masking Plus
2 Days

- Define the masking process
- Access and browse the Masking Engine Interface
- Identify Sensitive Data
- Select Data Inventory
- Validate Data Inventory
- Implement Data Masking
- Utilise the masking API

If you have specific requirements where the syllabus and structure of the listed courses are not an ideal fit, we offer a consultation to fully understand your needs and build a bespoke training program to suit.

KUZO DATA – YOUR TRAINING PARTNER

We run our courses at the customers location and/or remotely to suit – there are now Delphix experts in New Jersey, London, Sheffield, Dusseldorf, Pune, Hyderabad, Hong Kong, Shanghai and Guangzhou thanks to Kuzo Data.

We offer a flexible and positive approach to course delivery and always strive for an enjoyable and fulfilling learning experience.

Contact our Principal Consultant and Head Trainer Matt Griffith directly to discuss your training requirements. He's passionate about training!
