DATABASE PROFESSIONAL SERVICES

Oracle 19c
"The industry's leading database continues to deliver leading-edge innovations… Experience the power of the next-generation database with unmatched performance, ease, and flexibility."
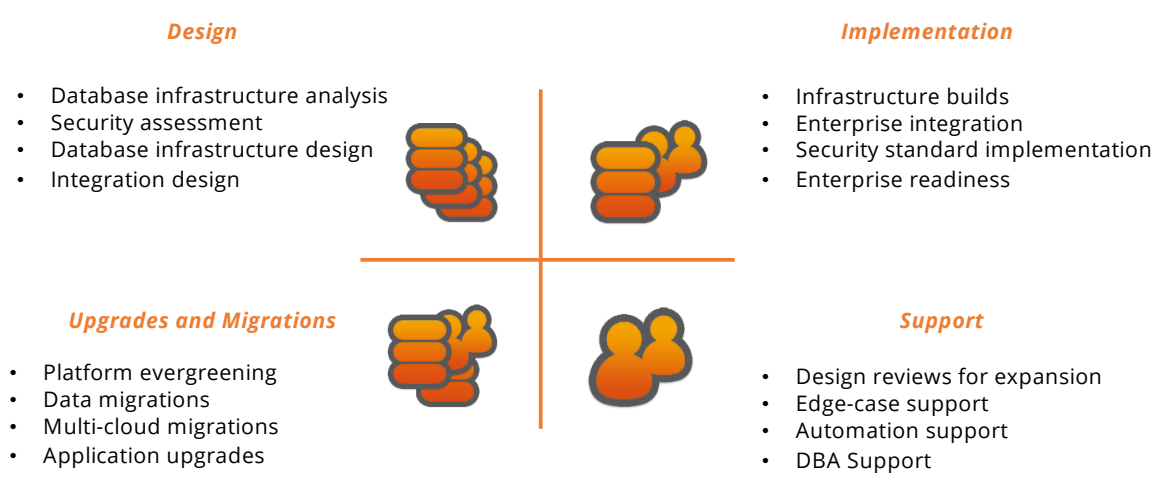

SQL Server 2019
"…brings innovative security and compliance features, industry-leading performance, mission-critical availability, and advanced analytics to all your data workloads"

MySQL
"…the world's most popular open source database… can cost-effectively help you deliver high performance, scalable database applications."

As with all database technology, delivering the headline promise to the business can be a complex and time consuming process, slowed by the lack of in-house technical product knowledge or limited resource availability. Rapid, successful delivery must be supported by adequately skilled people dedicated to the project timescales.

Finding and hiring technical resources requires time consuming HR processes and finding a resource in the market with the correct skills may be impossible.

Using a proven and trusted partner provides the most efficient route to successful technology projects, meeting your business goals and reducing timescales.

Design

- Database infrastructure analysis
- Security assessment
- Database infrastructure design
